Complete the answers to the questions below to complete your project report. Create a PDF of the completed document and submit the PDF with your project.

Question	Your answer:
Step 2: Domain Choice What domain did you choose to fine-tune the Meta Llama 2 7B model on? Choices: <ol style="list-style-type: none">1. Financial2. Healthcare3. IT	Financial
Step 3: Model Evaluation Section What was the response of the model to your domain-specific input in the model_evaluation.ipynb file?	Input: "The investment tests performed indicate" Output: "that the proposed algorithm is able to select the best model for the data in a way that is not biased by the model complexity. The proposed algorithm is applied to a real dataset and the results are compared with those obtained by using the classical methods of model selection." "
Step 4: Fine-Tuning Section After fine-tuning the model, what was the response of the model to your domain-specific input in the model_finetuning.ipynb file?	Input: "The investment tests performed indicate" Output: "that the management of the Company has been able to achieve a high level of efficiency in the management of its resources and the use of its assets.\n\nThe Company's financial structure is characterized by a low level of debt and a high equity ratio.\n\nThe financial structure of the Company is characterized by"
